

Your Solution for Rusted or Leaking Condensation Pans

Increase profits and decrease labor. No need to replace the pan. Without pulling the pan, pour Pan-Coat into the pan and it will **self-level and even cure under water**. With very little labor Pan-Coat can restore most pans in a matter of minutes.

Pan-Coat offers superb chemical resistance to many corrosive agents. The incorporation of rubber allows for flexibility as well as high impact resistance. High cross-linked density, ceramic filled novolac designed to provide long-term chemical resistance and immersion service. Pan-Coat even adheres to damp substrates. **Material also includes an anti microbial agent to protect against future mold growth.**

Protect your assets with a

MariShawn Coat

- Pan-Coat has a cure time of about 1-2 hours.
- Pan-Coat is made with 100% solids (no solvents, no VOC's) and high solids formulations.
- Pan-Coat has a self leveling formula.
- Pan-Coat can cure under water.
